

Your School Garden

Why plant flowers?

Flowers attract birds,
bugs and butterflies!

Why do we want birds, bugs and butterflies?

- Pollination

What is pollination?

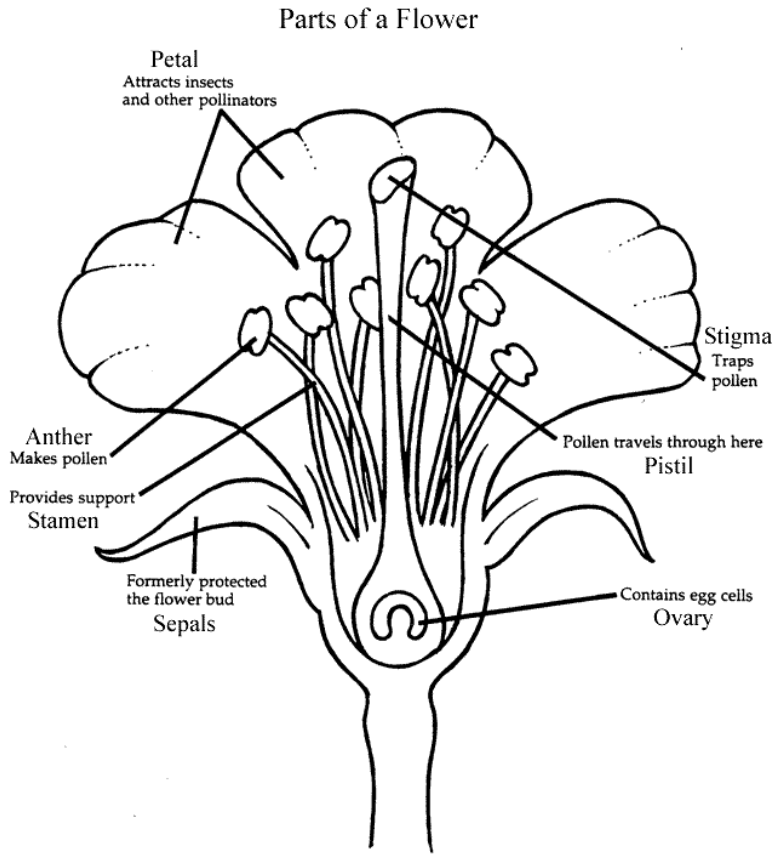

Do bees pollinate on purpose? Or is it an accident?

Butterflies pollinate too. Is that important?

- What does the butterfly want from the flower?

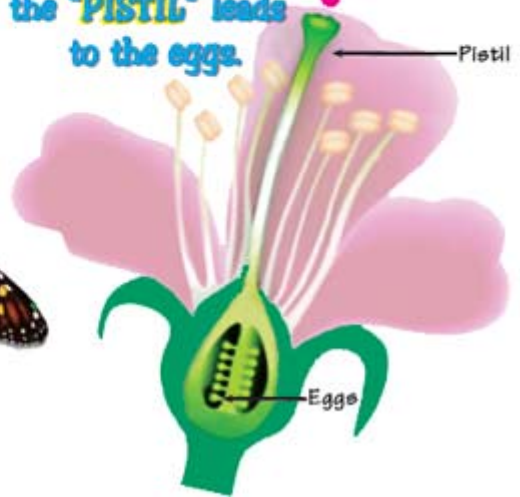

- How does pollination happen?

Pollination

One part of the flower called the "ANTHER" makes pollen.

Another part of the flower, called the "PISTIL" leads to the eggs.

Why do we want birds, bugs and butterflies?

Good bugs eat the pest bugs

Can you think of other beneficial insects that eat garden pests?

Pollinated flowers make fruit and seeds

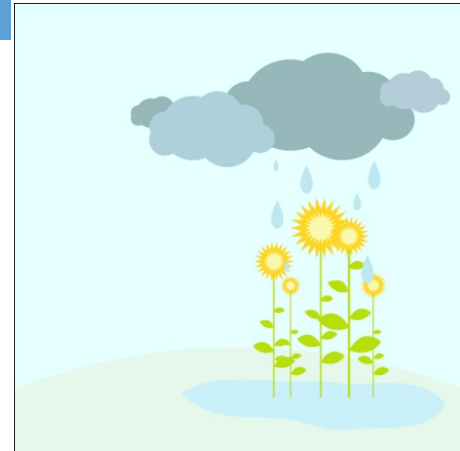

- We need pollination to have a successful garden

What does a plant need to grow?

- Sun
- Water
- Nutrients from the soil
- Air

- Just like you and me

Now let's plant some seeds
